IMPROVED BLAZE

MINIATURE ROSES

These petite yet sturdy Roses make fairyland a reality. The wee green buds expand into lovely little blooms of thumb-nail size. They are intriguing little plants, 6 to 8 inches tall, with tiny rich green leaves. A half-dozen plants will provide a continuous supply of flowers from May until frost for miniature arrangements. Plant them around a pool, in the rock garden, as a narrow border for Rose beds. Fine, too, for window and porch boxes. Care for them as you would Hybrid Teas.

All are sturdy 3-inch pot plants, ready to bloom

They require acid soil, and it is always best to mix a liberal amount of peat moss or rotted oak leaves into the soil at the time of planting, and to add a mulch of either leaves or peat moss—a little each year, preferably in the fall. This will furnish the proper soil condition that they need. At maturity, these handsome shrubs will attain a height of 4 to 6 feet. Plants offered are grown from seed of the finest new reds. No doubt, of course, that these varieties will show some variations in color; therefore the plants offered are not guaranteed as to color, but we can assure you that whatever color you get, it will be fascinating and most beautiful. 3-yr.-old, transplanted plants, 10 to 12 in. high, \$2.35 each; 2 for \$3.95; 4 for \$7.25; 12 for \$19.75.

CARROLL GARDENS FINEST HARDY MUMS

Hardy Chrysanthemums are among the most dependable flowers in the autumn garden, providing glorious color and spicy fragrance from early September (August with some varieties) until heavy frost.

There are Chrysanthemums of many types, from the Cushion Mums for low mounds of color in borders and rock gardens, to the long-stemmed kinds for cutting.

We feel that we have one of America's finest and most up-to-date Chrysanthemum collections. Our list includes selected varieties from the best Chrysanthemum specialists in the country, including some of our own introductions and the new imported Super Giant English varieties.

Due to lack of space, we are listing only the most important varieties that we have. Many other sorts are available. Write us if you are interested in them.

CULTURE. Chrysanthemums will grow in any good average garden soil which has been enriched with manure or good commercial fertilizer. Plant them 15 to 18 inches apart. Cultivate the soil between them, particularly while they are in the young stage. You can pinch the plants up to July 15 if they are tall and spindly. Don't pinch any more after that date. Hardy Chrysanthemums do best if grown in full sun. If they are planted in the shade, they will grow too tall, have weak stems, and produce inferior blooms.

NOTE. Late April, May and June is the ideal time to plant Chrysanthemums. The nice healthy potted plants we send will make bushy growth by fall, covered with hundreds of blooms. They will give you a wonderful display in your garden and all the cut flowers you want for your home.

A truly hardy, early-blooming "Rayonante" type Mum has been much desired, and this one, the first in that category, is sure to be popular.

Strong blooming-size plants, \$1.00 each; 3 for \$2.50. Limited 3 to a customer.
